

Accurate Astronomical Clock for Crestron

Brand: HADA Systems

Product Code: hs-aac-c

Availability: In Stock

Processor Type: Crestron 3 and 4 series

Version Number: 1.x

Price: \$0.00

Short Description

Inconsistent astronomical scheduler times in your Crestron program? This Free module offers accurate Sunrise and Sunset times for the Crestron scheduler.

Description

Get your Crestron scheduler working as it should with this simple and **free** module for Crestron 3 and 4 series processors.

We made this module after much frustration with inconstant times on the scheduler functions, specifically when trying to schedule a time that is based on the sunrise/sunset time.

We have also included the PHP scripts that power this module so that you may host it yourself for your customers if so desired.

We do however offer our server to use for free, simply use the default value of *crestron.hadasystems.com* in the server location parameter.
