Price: \$99.00

Short Description

Now any device with a communications port can be added to the network and then controlled by your control system with our Crestron Compatable WFS-1 WiFi Serial port module

Description

Now any device with a communications port can be added to the network and then controlled by your control system with our WFS-1 WiFi Serial port module.

Our WFS-1 WiFi Serial port module allows you to connect any serial based device to any network based control system allowing you to control those devices with standard serial based control modules and commands over Wi-Fi

- The Wi-Fi based connectivity allows for quick and easy installation without the need to pull physical wires
- The 2.4ghz Wi-Fi network allows for extended range to reach those out of the way places where wires are unavailable or impossible to pull
- Simple Web based setup and administration with any Smartphone, Tablet or Wi-Fi enabled computer, no special software needed
- OTA upgradeable firmware for easy installation of future updates and features.

- Two way communication allows for real time feedback from the controlled device
- Compact size allows for easy installation in tight locations (*less than 3" square*)
- Free Crestron and Control4 modules for advanced communication and control options including optional access security
- Open platform with full documentation allowing for integration with your own custom modules or any other modern network based programmable control system
- Allows you to connect any serial enabled device to any network based control system via WiFi
- Allows you to use standard serial based control modules and commands over WiFi
- Great for adding control to those out of the way pool controllers, alarm brains, devices with unstable net cards, or even no net card at all
- Can be powered by standard USB (*5v 1a min / 5v 2a max*) or the included power supply.
- Standard female DB9 connector with included gender changer
- **Unlock the full power and options of that Smart device for your client!**
When added to a Smart TV, our WiFi units separate the device control network from the media network, allowing for dependable user firmware updates without those updates causing you to lose device control
